WHAT IS A ZEUGMA TOKEN

The Zeugma token book adaptation is a project and is the first on a global scale with this feature. The NFT card characters were selected from the characters mentioned in the book and adapted to the game in this way. The project allows real people to earn ZEUGMA (ZGM) tokens by playing the game. 280,000,000 units of the ZEUGMA coin, of which the total supply is 400,000,000 units, are reserved for the game. Of the remaining 120,000,000 units, 4,000,000 units will be reserved for pre-sale, and the rest will be partially released to the stock exchange within 24 months. After trading on the exchange, the ZEUGMA tokens that players earn in the game will be withdrawn to their wallet account at the request of the player and cashed on the exchange according to the real person's preference if they want, they can keep them if they want.

MISSION AND VISION

It aims to offer a cryptocurrency that is decentralized and in line with its vision of increasing access to person-to-person (P2P) global financial networks. The Zeugma(ZGM) cryptocurrency creates a cryptocurrency with a valid value in real life. It can be released after the pre-sale and transferred (traded) on the blockchain network. Each currency has three main functions in itself: a savings instrument, an exchange instrument and an account unit. The fulfillment of all these mentioned functions makes Zeugma applicable in terms of multiple areas of use. There has been an active role of well-established local and global crypto exchanges in the wide adoption and dissemination of crypto currencies. The primary area of use of Zeugma is its ability to provide alternative solutions for convenient currency inflows and outflows in exchange transactions to combat high volatility in the cryptocurrency markets. In this regard, Zeugma ensures that crypto currency transactions can be continued in official transactions that are critical, especially during periods of securities decline. Compared to existing financial systems, stable crypto currencies that have superior qualities do not have a chargeback risk. The Zeugma network mesh provides a privileged payment option for trading and e-commerce sites. The underlying technology of Zeugma is based on transparency, making it traceable to the public. All transactions performed with Zeugma are subject to smart contracts in order to ensure the management and security of the network. Dec aims to raise awareness about Zeugma technology with a team and communication network of blockchain experts, software engineers, financial managers and academics. Together with this awareness, it serves to implement the vision of connecting with the decentralized Internet of tomorrow from the traditional financial system.

WHY CHOOSE ZEUGMA TOKEN

Zeugma token aims to create a decentralized world, provide its users with the opportunity to experience different experiences and create their own ecosystem. Within this ecosystem , users

- Token
- NFT card
- Game
- Sunday place (shopping with ZGM)
- Creating your own blockchain network
- Radio and TV (the first crypto channel)

and a unique world with its own NFT Sunday also provides an opportunity to have unlimited experience.

CRYPTO EXCHANGE AREAS OF USE

For the last few years, Turkey has been on the list of the 5 countries where citizens use or own the most crypto currency. Current statistics show that Turkish citizens are the most common users of crypto currencies in the world, one out of every five people uses crypto currency, and individuals own and/or use crypto assets at twice the rate compared to the second largest group of users on the list. The adoption of crypto-currencies on a global scale is aimed at being mentioned and listed on the world's top 20 exchanges and by name. The Zeugma team plans to focus on the main issues such as eliminating deficiencies in crypto currency exchanges and eliminating risks in foreign currency markets with zeugma, which it has developed after extensive situation analysis and studies. In addition, zeugma aims to launch both nft Sundays and shopping markets and other crypto assets on its own blockchain network. With its experienced team, it aims to work smoothly with diligent dedication from the technical team to the advertising team in the meticulous and dedicated progress of the project...

GLOSSARY OF TERMS

PUBLIC KEY: A generic, alpha numeric number derived from a special password and used to receive crypto currency. **Open Internet:** A basic concept of network neutrality, according to which information is equally free, accessible and independent of the financial purposes of Internet Service Providers within the framework of the World Wide Web (WWW). **Smart Contract:** A computer protocol designed to facilitate, verify, or implement the negotiation or performance of a legal contract in a digital environment. Smart contracts allow reliable transactions to be made without involving third parties. **Blockchain technology:** An ever-growing list of records called blocks that are linked and secured to each other using password writing and calculations **Digital/Crypto Wallet:** A software program that stores personal and public passwords and interacts with various blockchains to allow users to send and receive digital currency and keep track of their balances. **Bep20 Crypto Currency:** crypto coins designed on the bnb smartchain platform and used only here, which can be exchanged for other tokens in this way or transferred to a crypto currency wallet, connected to a standard list. **Bnb smartchain Network:** An open source, public, widespread blockchain-based computing platform and an operating system with smart contract functionality. **Secret Key:** A secret, alpha numeric password/number used to spend/send crypto money. **Destruction:** A deliberate action taken by the creators of crypto currency to "destroy" – or remove from circulation - a certain part of the existing total tokens that exist

Nominal Currency: Dollar, Euro and Turkish Lira, similar to the official currency printed by the government. The value of nominal money arises from the balance between supply and demand and the stability of the government that Decodes the money, rather than from the value of a financial asset that supports it.

Anti-Money Laundering Laws (AMLs): A set of procedures, laws or regulations designed to put an end to the practice of generating income through illegal transactions.

Crypto Asset: An encryption data and software code unit with an exchangeable asset value.

Decentralization: A network design that is not managed by a central institution and is free from the presence of a third party, driven by person-to-person interactions.

Know Your Customer (KYC): Rules and procedures by which a business identifies and verifies the identity of its customers. This term is also used to refer to the bank and money laundering regulations governing these activities.

Coin Creation: Deliberate action initiated by the person who mints new crypto coins to create new tokens.

Stable cryptocurrency: A term used to describe a crypto asset that forms the basis of allocated assets and/or is managed by software algorithms to ensure price stability.

Application Programming Dec (API): A set of programs, protocols and tools for creating software applications. The API specifies how software components should interact. In its general sense, it is a Decisively defined set of communication methods between different software components.

Management: All administrative processes undertaken by a government, Sunday or network...
